

Timber Procurement Policy

White Horse Contractors Limited is committed to continuous improvement in environmental and sustainability performance. We will therefore seek to procure timber only from independently certified, legal and sustainable sources, such as those certified under the Forest Stewardship Council (FSC) scheme.

If we cannot secure timber from an FSC-certified or equivalent source, we will obtain it from other independent certification schemes or independently audited sources that can demonstrate legal supply from responsibly managed forests.

Implementing the policy

To ensure this policy is implemented effectively, we will:

- incorporate its requirements in our company management systems
- embed it in our supply chain, through information and instruction
- communicate the policy to all our employees
- engage our customers in its implementation.

Our Compliance Manager is responsible for incorporating this into our management procedures and communicating to all our employees. Divisional management is responsible for its implementation through the procurement process and obtaining proof of certification.

It will be reviewed annually and updated as necessary, to ensure it is consistent with developments in the sustainable sourcing and use of timber and wood-based products.

For and on behalf of The Board of Directors
